Meet “Bucky” our Beaver

Didja Know? Beavers are the largest rodent in North America and Canada's symbol for over 300 years. <https://www.canadiangeographic.ca/article/animal-facts-beaver>

They can weigh up to 32 kg and may be over 1 meter long.

Beavers are known for their buck teeth, large, flat tail and thick brown fur.

Beavers are excellent swimmers and are built for underwater work.

Their front teeth stick out in front of their lips, so that they may cut and chew wood that is submerged underwater without getting water in their mouth.

A common belief about beavers is that they eat wood, when in fact it's only the bark they eat.
